

**Any other relevant information- Water Conservation Facilities**

The college has designated bore wells from which water is drawn for the dormitories and academic buildings in order to satisfy the demand for water on the campus. In the hotels and academic buildings, the college has also installed rain water harvesting systems. There is also a fully functional softening plant with a sand filter and water softening capabilities. In order to maintain a green environment, the institution has also installed a well-planned and carefully designed water distribution system around the campus.
